

EURO-LOCKS
LOCKING SYSTEMS FOR INDUSTRY

Connected Locking Systems

Zodiac
connected locking systems

Zodiac touch screen locker systems

The Zodiac system is an innovative, reliable and intelligent locking solution for parcel management and personal storage.

Compact

With dynamic locker assignment, Zodiac removes the need for one locker per person and reduces capital expenditure and footprint.

User-friendly

Operating the system is simple using a clear, responsive user interface.

Discreet

All technical elements can be hidden to achieve an attractive, sleek appearance.

Advanced

System management and data logging abilities offer a new level of control.

Designed from the ground up for reliability and ease of installation, the Zodiac system is elegantly simple. There are no daunting electrical enclosures or complicated on-site wiring. Instead each system comprises just three elements:

- A Touchscreen Terminal with fast, user-friendly software
- Robust E-Latches with best in class strength and performance
- Distribution Boards to connect the latches to the terminal

Euro-Locks has been designing, manufacturing and supplying locking systems since 1889. Call today and speak to the experts.

Integrated hardware and software developed to work seamlessly together

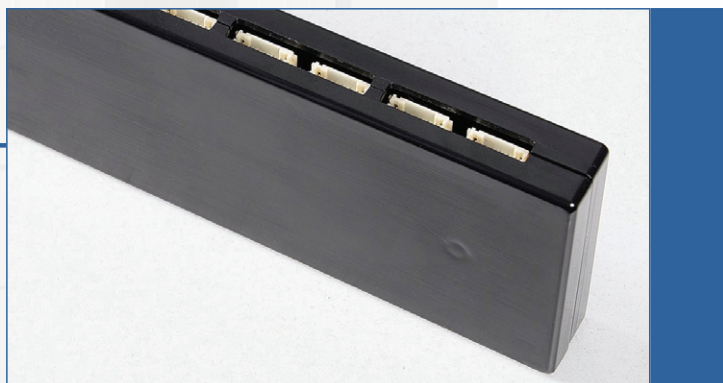

Zodiac is a complete system comprising E-Latches, Distribution Boards and a Touchscreen Terminal running our proprietary software. Together they create exciting new capabilities for locking systems including real-time feedback, powerful management tools and opportunities for branding and customisation.

Intelligent Hardware

Touchscreen Terminal

The gloss black touchscreen fits flush to the locker face. It is bright, high resolution and robust enough for public use in monitored, indoor environments such as building lobbies. It is easily mounted with adaptable fixing brackets. The intuitive control system includes wifi and ethernet connectivity.

Distribution Board

These communication units connect to the terminal and each can control up to 12 e-latches. Additional boards can be linked together to control up to 3072 e-latches in total. The modular nature of the system makes scaling and maintenance straightforward.

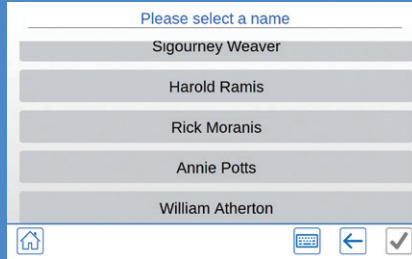

Electronic Latch

The unobtrusive e-latch has best in class security and fast and quiet opening, even under load. It has a rugged metal case and features a manual key override and optional rear mechanical cable override. The locking bolt is designed to accommodate minor door misalignment, to make fitting easier.

Powerful Software

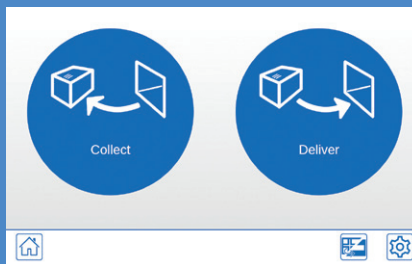

A streamlined user experience

Clear, easy to use menus are designed to make every interaction fast and intuitive. Parcels or belongings can be delivered and collected in seconds without any prior training. Email notifications are possible and the system supports multiple languages.

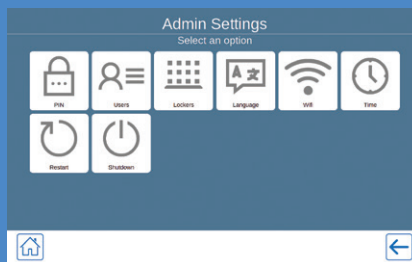

Sophisticated management tools

System settings are controlled through an administrator menu on the terminal. User data and access permissions can be imported easily from PC files. Usage logs are available for audit purposes.

Unique branding and customisation

The software has been designed to support custom branding and colour schemes, which can be applied on a system-by-system basis. Further customisation is also possible on request.

RAS Remote Allocation System

The RAS system allows digital locks to be remotely managed via a web based interface. This eliminates the need for costly on-site support and maintenance.

Post Box Lock

Designed for use in the postal and parcel dropbox markets, this innovative lock allows the user to retain the key to their mailbox at all times. The mailbox can be opened and secured by turning the knob and, after each delivery, the lock is reset so the mailbox cannot be accessed.

Horizon Real Time Clock

The Horizon Digital lock is now available with an accurate Real Time Clock. This feature means the lock can be made operational only within specified hours or it can be rented for set periods of time. Time and date can be set and read from the keypad and codes can be generated on a PC or on the website.
