HORIZON REAL TIME CLOCK

The Horizon digital lock by Lowe & Fletcher is now available with an upgraded processor with accurate Real Time Clock (RTC). This allows several exciting new features:

The lock can be made to unlock and/or deny entry for a specified period each day. Designed for use on lockers and personal storage applications, this useful feature can help alleviate the issues caused by users who leave their belongings in a locker even when not on site. The locks can be set to open at a chosen time and left items can be removed, leaving all of the lockers in use all of the time. Sensitive document lockers can also be locked down overnight if an office is unmanned.

The second, highly innovative, feature is that the lock can be rented for variable periods of time using a remotely generated activation code. Rental codes can be generated online and emailed instantly to users. This can be integrated in to your own apps and websites using our API if desired.
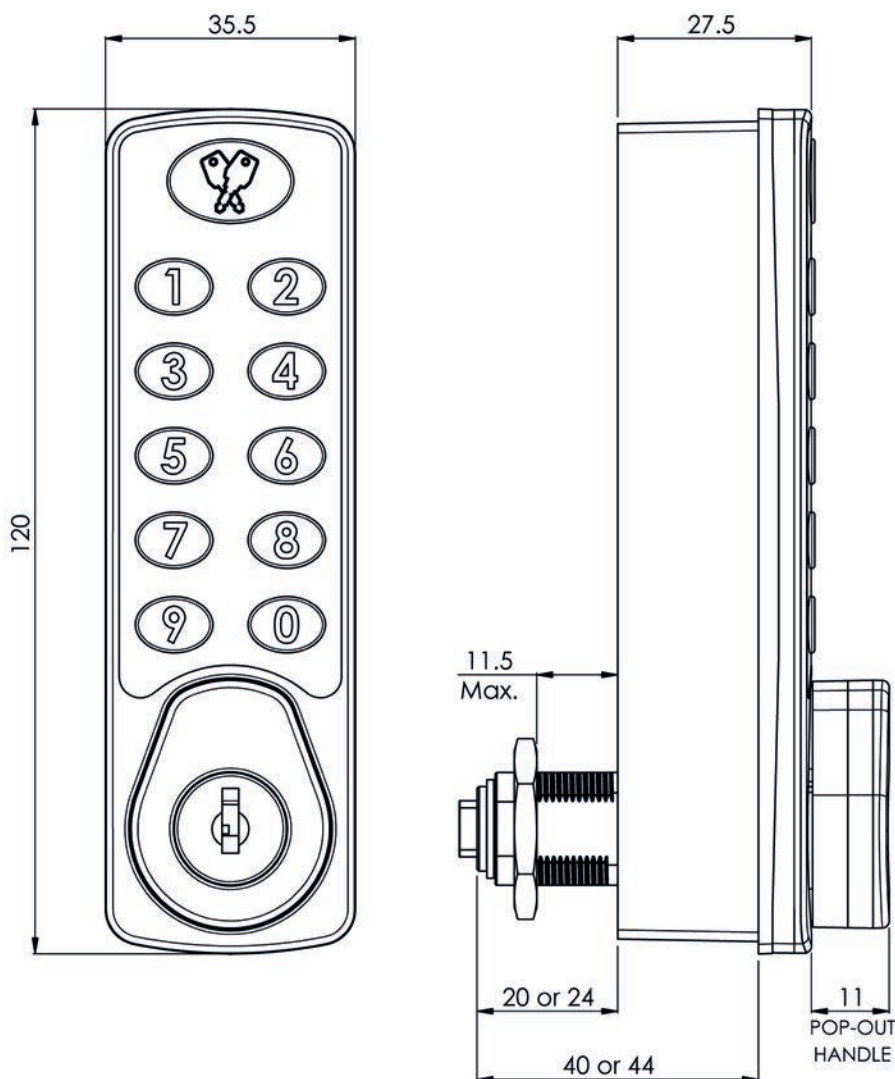

Finally, multi-user mode enables the lock to be programmed with up to 50 users at one time for shared lockers where individual access needs to be able to be revoked should the need arise. As with all Horizon locks, the unique mechanical override key permits managerial access in the event of an emergency and an impressive range of custom colours will complement any environment.
