

FITNESS LOCKING SOLUTIONS

The easy-locking system for the fitness community.

SECURITY MADE SIMPLE

Leisure time is precious. You know that better than anyone. So the last thing your members need is to waste time struggling with lockers.

Who wants to be looking for lost keys, or trying to find a spare locker that isn't taken? Maybe you are struggling to get faulty locks to work, or constantly looking for spare change to swap money for coin locks.

That's where Euro-Locks come in.

Choose the system that's right for you

No matter what the business and how your members use your lockers, we've got a system that will work brilliantly for you.

Mechanical systems

Our range of mechanical locking systems is sure to keep even the busiest locker room on its toes! From camlocks to latch locks and combination locks, our mechanical locks are precision manufactured to ensure lasting performance.

Latch locks are a classic solution for lockers that require a basic level of security. These locks typically have the lock incorporated into a handle and are secured with the member's own padlock.

Camlocks are our most versatile locking solution. Available in a variety of finishes and body lengths to suit specific needs, they are a popular choice for fitness lockers where both security and frequent access are required.

Our combination locks are designed to withstand the rigors of high-performance fitness environments, ensuring long lasting protection for members belongings. Available in a versatile range of different shapes, sizes and finishes for seamless integration, our combination locks deliver consistent security without the need for hard wiring.

Entry-level digital systems

When simple PIN-code access is all that's required our easy-to-use digital locks are the key. From Gemini to Nimbus and Horizon, our standard range of digital locks provide you with all the functionality required for secure, digital locker room storage. Our digital locks can be supplied for use in both wet and dry changing rooms, even in rooms with showers. To avoid locker blocking a scheduled timer function is also available.

Should there be an emergency, ALL Euro-Locks digital locks come with an override key and master code, so staff can open the locker, if necessary.

Scheduled Unlock systems

Both our Horizon and new Nimbus locks include a 'Scheduled Unlock' function that allows them to auto unlock at a fixed time each day. A quick sweep lets you know the storage banks are all clear and that you've got full capacity each day. No need to invest in even more lockers or lose floorspace.

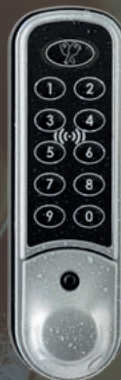

The Horizon locks also feature a pop-out handle so users can quickly see if a locker is in use or not.

RFID systems

Our RFID enabled locks can be used independently or programmed to work with existing access control systems. Members can simply 'swipe' in using the same fob, bracelet or card they've always used. All our RFID locks can also be used in wet areas, even those with showers.

These locks also have an override key and keypad for PIN and card access.

NFC battery-free systems

ECHO is wire and battery free. It doesn't even need mains power. It uses Near Field Communication (NFC) to harvest the tiny amount of energy it needs to open and close the lock. All a user needs to do is download the ECHO app and depending on how the lock is configured, the user selects their locker, then uses their mobile to lock and unlock.

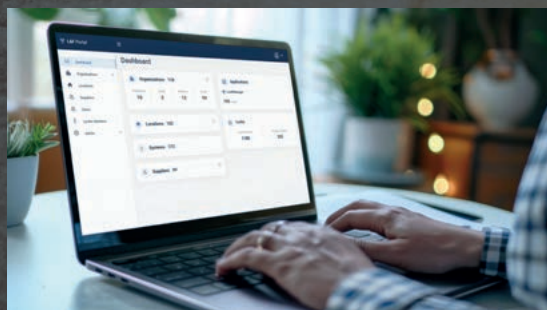

ECHO comes with an emergency override key should you need quick access.

Touchscreen systems

Using RFID technology and secure PIN code access, Zodiac delivers smooth, frictionless storage with just the simple tap of a card. No keys. No waiting. No hassle.

Users can access lockers instantly, using their RFID card or PIN, no admin needed.

Cloud connected, real-time control

With ECHO and Zodiac, administrators can manage locker systems remotely. Cloud connection shows you what's happening in real time, so you can monitor usage capacity and instantly boost locker availability if you detect 'locker blocking'.

EFFORTLESS ACCESS

We make life easier for everyone

Our locks are made easy to use, no matter how advanced the system. We do that for a reason. Simplicity speeds up footfall through your business, makes a great first impression on members and it gives users another positive reason to keep coming back.

Don't sweat your assets

Our locks are so simple to supervise, they free up your team to look after members – not burn their time looking after lockers.

The 'Scheduled Unlock' function helps guard against locker blockers by automatically unlocking all lockers at a set time each day. That means you can quickly check that they're all free and ready to be used every single day. Giving your team more time to spend on members.

Boost your locker room performance

Give your members that premium locker room experience without the associated big tech costs. Upgrade your locker locks to the latest RFID and enhanced digital locking technology without drilling holes or replacing lockers door. Common mounting points mean locks can simply be swapped out with minimal downtime and cost. No drilling or door replacements required when upgrading from our Zenith or standard Nimbus locks.

Check out our range and you're sure to find many more.

SMART LOCKERS IN FITNESS AND LEISURE

Smart lockers are perfect for gyms and health clubs that want to stand out from the crowd. They allow hassle-free allocation to lockers for both you and the customer while the advanced smart lock features allow you full control of the lockers, onsite or with remote access.

ZODIAC SMART LOCKING SYSTEM

Zodiac smart locking system for fitness and leisure is more than just state-of-the-art locking hardware. Our touchscreen, smart locker management system can be integrated with access control systems to provide a complete solution for fitness and leisure applications. The self-service system provides customers with automatic locker allocation using either a PIN number or RFID reader.

- Perfect for gyms and health clubs who want to differentiate themselves from the competition
- Create completely sleek locker rooms with no visible locking hardware
- Brand the touchscreen and push useful information
- Configure advanced settings for such things as session duration, limiting lockers per user, overnight clear-out and to easily open all lockers for cleaning

ECHO

ECHO is ideal for gyms and health clubs who want the benefits of a smart locker system but without the complex wiring, network issues and associated costs. Easy to set-up and even easier to use, ECHO is a battery-free, app-controlled smart locking system - complete with mobile and web-based management.

Designed for how people really work out, ECHO lets your members use the lockers in three different modes.

- In Public mode, anyone using the gym can use a lock
- In Public Registered Mode, any registered member can use the lock
- While in Private Mode, members can be allocated a locker that's purely for them

Monitoring locker access with ECHO is effortless for staff. Track access history with the ECHO app or portal. Instantly see locker utilisation % and who accessed each lock and when. This ensures solid security and control, no matter how many users are on the system.

WHY EURO-LOCKS?

As a specialist manufacturer of locking systems, Euro-Locks and Lowe & Fletcher supply a wide variety of locks and locking solutions for fitness and leisure applications.

The teams at Euro-Locks and Lowe & Fletcher work closely with our customers to ensure they have the right locks and locking systems for their requirements.

Our product range is extensive and all of our locking systems are designed, engineered and manufactured in one of our six facilities.

So whether you are looking for a standard locking system, an adapted design or a totally bespoke solution we are able to develop products to meet all your locking needs.

Part of The Lowe & Fletcher Group, we have been making locks since 1889 and manufacture over 80 million locking systems annually.

ADVANTAGES

- A varied range of digital, RFID and mechanical locking systems including smart locking systems designed for Lockers and Personal Storage
- We can supply standard or bespoke products in high or low volumes
- We work closely with our customers to design bespoke locking solutions specific to their exact requirements
- We manufacture over 80 million locking systems annually from our European and UK factories
- We have made locks since 1889 and are a sixth-generation family owned business

From the simplest mechanical lock through to RFID and electronically controlled systems, we have a solution to suit all needs. If you need advice or a bespoke solution please contact our team who will be happy to help you.
