

SMART LOCKERS IN THE HOTEL INDUSTRY

Ideal for luggage drop systems

The ever increasing capabilities of technology has ushered in a new era of contactless check-in and check-outs within the hotel industry. Due to intuitive smartphone apps and automated systems guests can now book, check-in and check-out of hotel or Airbnb style accommodation without any human interaction.

Whilst this model is being widely adopted across the hospitality sector due its efficient and seamless nature, this transition has presented travellers with a new challenge: what happens when guests want to check-in or out but need a secure place to store their luggage?

How do we meet the demand?

If a guest arrives earlier than their allocated check-in time, they will often require a secure location to keep their belongings so that they can explore the wider area until their accommodation is ready.

However, many hotels either do not have secure luggage storage facilities or they may only have an unsecured room for bags.

To meet this increasing demand, many hospitality providers are now turning to **smart storage lockers powered by RAS Booking** to provide guests with a secure means of luggage storage that aligns with the modern model of seamless travel.

How do RAS lockers work?

At Lowe & Fletcher, we offer a wide range of digital smart locks that feature seamless compatibility with our powerful RAS Booking software. We support locker manufacturers in developing truly useful lockers with real market demand.

At the locker or storage area, the guest simply scans a QR code, taking them to the Remote Locking website. Here they can check availability and book a locker directly through their smartphone. Once the booking is confirmed, the guest receives an email that contains the location and access pin for their luggage storage locker.

Secure your luggage lockers

Designed to provide the same robust design quality as our world-leading mechanical locking systems, our RAS enabled smart locks provide:

- ✓ **Security** – With advanced encryption and authentication protocols, electronic locking systems ensure that guests' belongings are well-protected.
- ✓ **Real-Time Monitoring** – Our smart locks enable real-time monitoring and reporting of locker usage, meaning operators can track occupancy, identify available lockers and ensure a smooth flow of guests in and out of the storage area.
- ✓ **Integration** -These smart locks seamlessly integrate with hotel management systems, ensuring that locker access codes are automatically generated based on reservation details, streamlining the overall guest experience.
- ✓ **Durability and Longevity** – Lowe & Fletcher's secure smart locks for luggage lockers are built with durability in mind. The robust design and high-quality materials ensure longevity, making them a reliable investment for hotels aiming for long-term efficiency.
