Remote Allocation (RAS) Booking System

Smart Locking Systems

No keys, no fuss

The Remote Allocation (RAS) Booking System from Lowe & Fletcher and Euro-Locks is lock management software for those who would rather let their users reserve a locker personally and pay for their booking.

Using the same software as the Remote Allocation System (RAS), the Booking System enables you to remotely manage access to all of your locks without the need to be on site.

Each bank of locks is set up with a mobile-friendly booking page which is accessed by users in advance, or by scanning a QR code on arrival. After users have booked, the site sends them their access code. Payment levels can be set (if required) and the booking system can be embedded directly into any existing website for a seamless user experience.

HOW IT WORKS

Operating the Remote Allocation (RAS) Booking System could not be simpler. Utilising our secure online portal, the end user is able to generate a timed access code for a designated storage locker whilst administrators have real-time visibility over bookings, scheduling and availability.

🔍 AT A GLANCE

1 At the locker or storage area, users scan the QR code with their phone which takes them to the Remote Locking booking portal where they can create a booking.

2 The portal will show the users the current available lockers, allowing them to pick the exact amount of time that they require access for.

3 Once a time-slot is selected, the user simply inputs their basic payment information to the portal and completes the booking.

4 When the booking is confirmed the user will receive two emails, one confirming the location of their locker, date and time of the booking and any applicable fee and a second email providing the unique pin number that will activate the lock.

Why it's so smart

Just some of the reasons why the smart lock management system may be right for you.

Remote Code Generation

The code for the next user is generated using the remote-locking website.

- ✓ Grant access without needing local staff
- ✓ No need to manually reset locks after each user

Offline Operation

Locks do not require an internet connection.

- ✓ Avoid complex networking and connection issues
- ✓ Remote management benefits without expensive network hardware

Website Management

Schedule bookings and send users their codes.

- ✓ The portal is ready-to-go, no need to develop custom booking systems
Available options

Adapt the functionality of our smart lock systems with a range of optional features.

Real-Time Clock (RTC)

The lock keeps track of the time and date, while activation codes allow the lock to be used for a chosen period of time. This makes it ideal for booking applications where the lock should prevent further use after the reserved period has expired.

- ✓ **Day Mode:** An activation code allows the lock to be used for a 24-hour period – the code is date generated and changes every day
- ✓ **Start/Stop Time Mode:** For finer control, start-end times for the booking are chosen on the RAS website and a code is generated which gives access only between these times

Website Interface (API)

The web API allows a registered website or app to generate lock codes directly from our secure server.

- ✓ Generate user codes from your own website, with no need to visit our main RAS site
- ✓ Create a unique interface tailored exactly for your business model, with RAS technology working in the background

Typical applications

The system works brilliantly across many applications and is ideally suited to the following:

Left Luggage Lockers

Perfect for digital check-in and check-out facilities in hospitality.

- ✓ Easy code generation with QR Code
- ✓ Real-time availability tracking
- ✓ Reservation management for administrators
- ✓ Avoids the need to manually reset each lock after use

Employee Lockers

Streamline the process of locker allocation in the workplace.

- ✓ Supports employee locker facilities at different locations
- ✓ The system can be easily adapted to fluctuating demand
- ✓ Website emails users a unique pin number to access a locker

Commercial Offices

Flexible reservation periods for staff and on-site visitors.

- ✓ Secure code generation ensures every code is deleted and reset after
- ✓ Forgotten codes can easily be retrieved, or reset, from the website
- ✓ Centralised management

We're here and ready to help

We have been manufacturing smart locks and locking systems in our UK facility for over 20 years and have sold over 2 million smart locking solutions globally. Supported by our expert teams in Europe and America, we are your trusted partner for any locking requirement.
